

User tools

You can find basic tools to interact with the Apex Fusion ecosystem here:

Wallets

- **Eternl Wallet** - Eternl is a wallet that supports all features of Prime and Vector networks. Use it to create or restore a wallet, send transactions, delegate your stake on Prime or connect to dApps on Vector. Also available as a web app [here](#). Remove or disable standard Eternl extension to avoid dApp connection issues.
- **MetaMask** - MetaMask is a wallet that supports EVM networks. The use of MetaMask is advised when interacting with the Apex Fusion ecosystem through the Nexus network.
- **Route 3 Wallet - Playstore** - Route3 Wallet is a mobile crypto wallet designed for secure and seamless transactions. It supports multiple blockchains, offering users an intuitive interface to manage assets, swap tokens, and interact with dApps on the go.
- **Gero Dashboard** Gero Dashboard is a wallet that supports both Prime and Vector.

Faucet

- [Developer Portal - Prime Testnet Faucet](#) - You can request testnet funds from the faucet and register your testnet stake pool to receive delegation here.

Block explorers

- [Prime Testnet Blockchain Explorer](#)
- [Prime Testnet Blockchain Explorer by Ethernal](#)
- [Vector Testnet Blockchain Explorer by Ethernal](#)
- [Nexus Testnet Blockchain Explorer](#)

Bridge

- [Reactor Bridge](#)

Eternl wallet supports both Prime and Vector Networks. The faucet only gives out tokens on the Prime network - to use them on Vector or Nexus, bridge them through the Reactor bridge.
