Eternl Wallet for Apex Fusion Ecosystem

The Eternl team offers a browser extension wallet designed for seamless integration within the Apex Fusion ecosystem. Currently, the wallet supports the following networks:

- Prime on both Mainnet and Testnet
- Vector on Testnet

Installation

You can download and install the Eternl wallet as a **Chrome extension** through the link below:
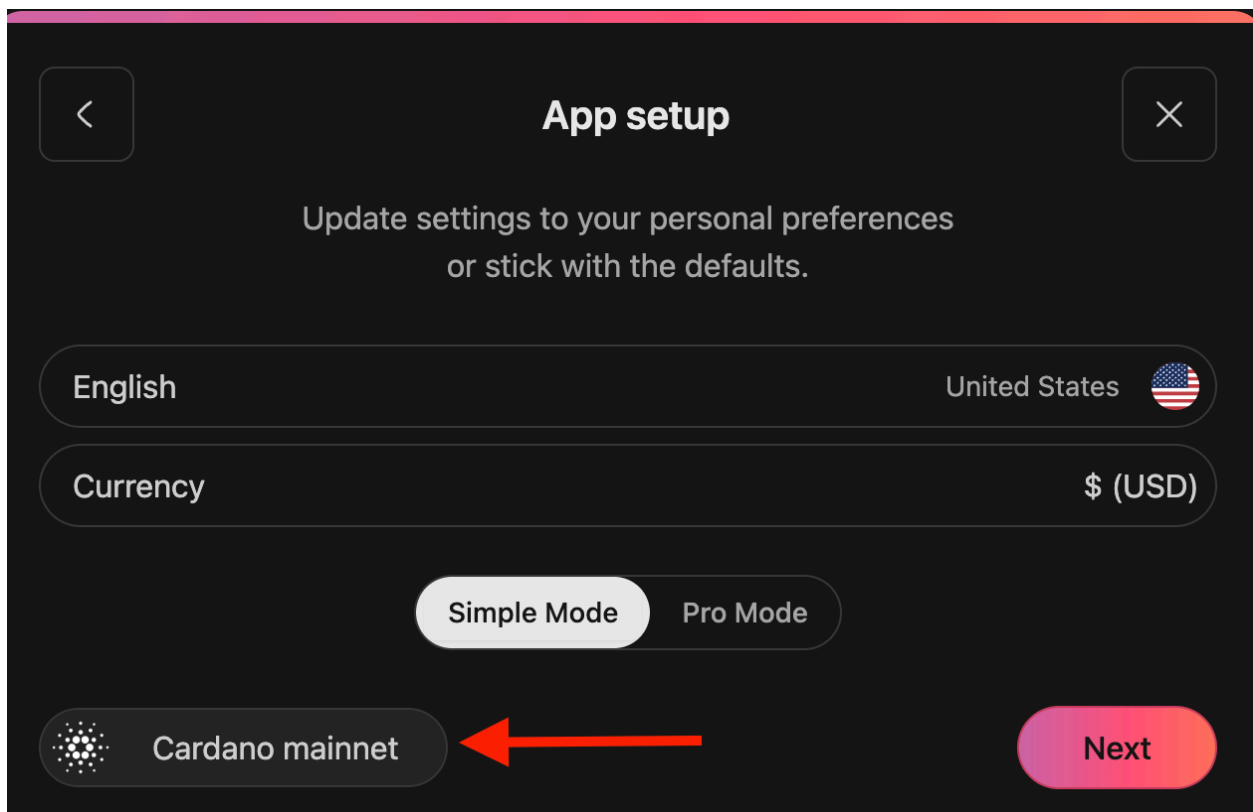

Download Eternl Wallet

Setup and Usage Tutorial

For a simple walkthrough on how to set up and use the Eternl wallet, check out this video tutorial at the link below.

Watch Eternl Wallet Setup Video
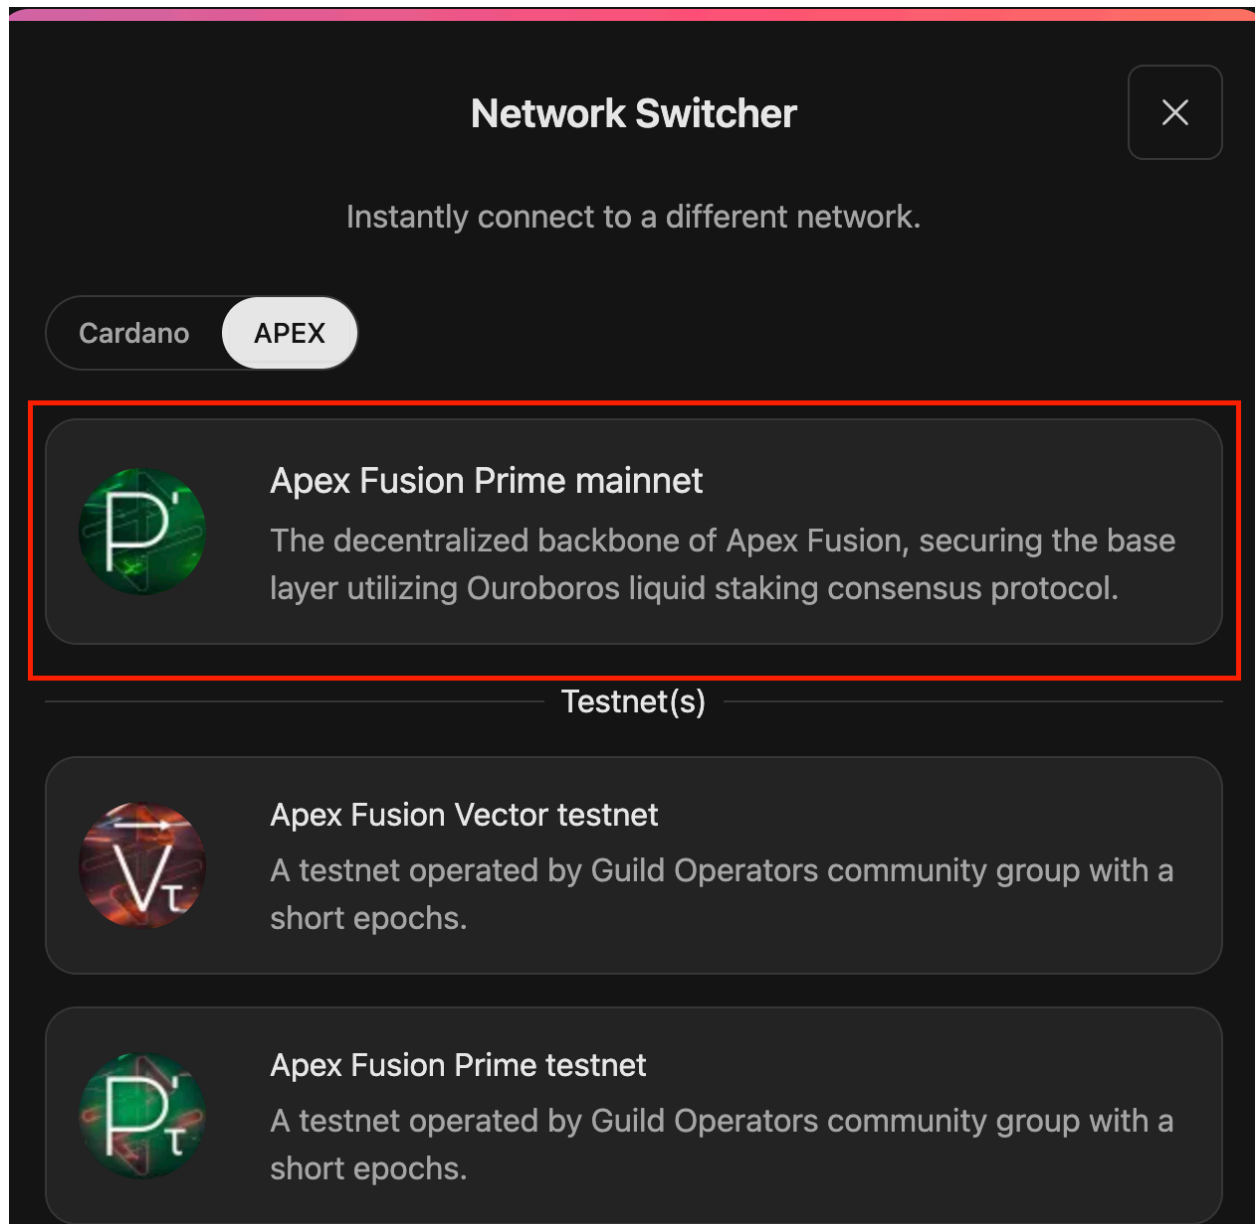

Important Notes

- **Network Selection**: Eternl supports several **Cardano networks** and two **Apex Fusion networks**. It's essential to select the correct network for your needs **before creating or restoring wallets**.

- **To switch networks, click on the button in the bottom-left corner, as shown in the image below.**

- **Then you need to choose the Apex network. You can find this button at the top. See the image below.**

- Finally, choose the Apex Fusion network you want to use—for example, Apex Fusion Prime Mainnet—and click on it.

- At the end, you should see the name of the network you chose in the bottom-left corner. Now you're ready to create a wallet.

App setup

Update settings to your personal preferences
or stick with the defaults.
